

Trustner Insurance Brokers

POSP Payout Management System

Revenue Control, Margin Protection & Scalable Growth

FY 2025-26

CONFIDENTIAL — MANAGEMENT USE ONLY

The Problem We Solved

Before this system, payout management was fragmented, opaque, and impossible to scale. Six critical pain points were costing Trustner both talent and margin.

Flat Rate for Everyone

Same percentage for top agents and new joiners — no incentive differentiation, driving talent attrition.

No Margin Visibility

Zero visibility on margin erosion per CDM/RM, resulting in uncontrolled revenue leakage across the business.

Internal Rate Comparisons

POSPs comparing rates with each other fueled internal politics and constant, disruptive upgrade demands.

Siloed LOB Management

Only General Insurance was covered. Life and Health managed separately — no unified cross-LOB view.

The Solution: A 4-File System

Four interconnected files work together to deliver complete control — from configuration to agent communication to accountability.

The Brain

Unified Payout System V3 — Master config with 189 products across GI + LI + HI. Editable CONFIG sheet with formula-driven auto-updates.

The Face

POSP Coded Schedule Sheets — 10 code-based files in TIB/POSP/XXX/2526 format. 3 LOB tabs per file. No category hierarchy visible to agents.

The Control

CDM/RM Target Calculator — Volume-adjusted targets based on POSP category mix. Scenario analyzer for what-if decisions.

The Key

Internal Code Decoder — Maps schedule codes to internal categories A-F3. **Strictly internal** — never shared with POSPs.

10 Categories x 3 Tiers x 3 LOBs

Category Tiers by Commission Level

Tier	Trustner Commission	Example Products
Tier 1 — HIGH	≥ 30%	TW Scooter, Commercial Vehicle, Traditional Life
Tier 2 — MEDIUM	15–30%	Private Car, Non-Motor, Health Renewal
Tier 3 — LOW	< 15%	SATP, ULIP, GMC

Revenue Sharing Range

40%

Minimum Share

Cat A, Tier 3 — lowest commission products

90%

Maximum Share

Cat F3, Tier 1 — top agents, high-margin products

10

Sub-Categories

A, B, C, D, D+, E, E+, F1, F2, F3

 **Default for new POSPs:** Category C. Upgrades to F1/F2/F3 require MD approval.

Per-LOB Category: The Game Changer

One POSP can hold **different categories for each Line of Business** — enabling truly surgical, performance-based pricing without one-off negotiations.

GI: Category E

Ramesh excels in motor insurance. Rewarded with a higher General Insurance share.

LI: Category B

New to life insurance. Starts at a lower share — room to grow with performance.

HI: Category D

Moderate health book. Middle-ground share reflects current health portfolio strength.

1,000

Unique Combinations

10 × 10 × 10 per-LOB assignments = truly custom deals at scale

0

Individual Negotiations

Every deal is system-defined — no rogue rate promises, no politics

Code-Based Naming: Information Control

The Problem

If a POSP sees "Category C," they immediately ask: *"What is Category F? I want that!"* Transparency creates escalation.

The Solution

Codes are **deliberately non-sequential and random**. There is no visible hierarchy — 074 is not better or worse than 058. Impossible to guess.

When a POSP asks about their schedule, the answer is simple: *"This is your commission schedule as per your individual agreement with Trustner."*

Code-to-Category Mapping (Internal Only)

Schedule Code	Internal Category
TIB/POSP/074/2526	Category A
TIB/POSP/058/2526	Category C
TIB/POSP/091/2526	Category F3

This mapping lives **ONLY** in The Key file. Never share externally. POSPs receive only their own coded schedule — no context, no hierarchy.

How It Works: Step by Step

Head Office / MD

Open Unified V3 → CONFIG sheet → Set sharing %. Auto-updates all 189 products. Approve F-category assignments.

Regional Managers

Open CDM Target Calculator → Team Dashboard → Enter targets + POSP category mix. Monitor Volume Multiplier (alert if >1.5x).

CDMs / Area Managers

Open Unified V3 → Assign per-LOB categories → Pick correct coded schedule file → Email to POSP. Agent sees only their commission.

Configure %

Set sharing percentages centrally

Issue Schedule

Send coded schedule to agent

Assign Categories

Map POSP categories per LOB

Margin Protection: The Math

Example product: **SBI General Health — New Business** | Trustner Commission = 50%

Category C POSP (Tier 1 Share: 75%)

Agent gets: $50\% \times 75\%$
= **37.50%**

Trustner keeps: **12.50%**

Category F3 POSP (Tier 1 Share: 90%)

Agent gets: $50\% \times 90\%$
= **45.00%**

Trustner keeps: **5.00%**

Margin Impact Visualized

ⓘ ⚠ Margin shrinks **2.5×** from Cat C to F3. F3 CDMs must generate **2.5×** **MORE volume** to deliver the same profit.

Volume Multiplier: CDM Accountability

The system automatically adjusts CDM monthly premium targets based on the payout weight of their POSP portfolio. **Higher sharing = higher volume responsibility. No free lunch.**

Multiplier = 1.00× All Cat C — Baseline target of ₹20L/month	Multiplier = 1.40× Mixed E + F1 — Target rises to ₹28L+/month	Multiplier = 2.50× All Cat F3 — Target jumps to ₹50L+/month
--	---	---

5 Control Mechanisms

Centralized Config

Only Head Office can change sharing percentages. No rogue CDM can promise unauthorized rates.

Volume Multiplier

CDM targets are tied to margin impact. Higher-category POSPs demand proportionally higher business volume.

Code-Based Naming

No POSP can compare categories. Eliminates demand escalation and internal rate politics permanently.

Per-LOB Flexibility

Surgical pricing per line of business. Reward only where performance exists — no blanket upgrades.

Approval Hierarchy

A–D: CDM assigns. D+/E/E+: RM approves. F1/F2/F3: MD approval only. Clear escalation path.

Key Metrics to Track Monthly

Head Office

- Weighted Average Margin % — Target: **>7%**
- Category distribution — Healthy: 60% in A–C, 30% in D–E, 10% in F
- Per-LOB revenue split: GI vs LI vs HI

Regional Managers

- Volume Multiplier per CDM — **Alert if >1.5×**
- POSP upgrade/downgrade count per quarter
- CDM actual premium vs required (gap analysis)

CDMs / Area Managers

- Individual POSP productivity: premium per POSP/month
- Category-wise margin contribution
- New POSP onboarding vs churn rate

A–C (Healthy Base) · 60%

D–E (Growth Tier) · 30%

F1–F3 (Premium Tier) · 10%

The Competitive Advantage

This system doesn't just solve an internal problem — it transforms how Trustner attracts, retains, and grows its POSP network at scale.

Retain Top Agents

Performance-based sharing means high performers earn more than competitors offer. They have every reason to stay.

Attract New Talent

Start at Category C, grow to F1 — a clear, transparent progression path that competitors simply cannot match.

Drive Multi-LOB Cross-Sell

Per-LOB categories incentivize agents to sell across GI, LI, and HI — not just motor. Diversified revenue per agent.

Data-Driven Decisions

Every category upgrade carries a quantified margin impact. No gut-feel negotiation — just numbers and accountability.

Scalable Operations

1,000 combinations managed through 4 files. The same system handles 100 POSPs or 10,000 — no redesign needed.

Summary & Next Steps

The System Today

189

Products

GI: 144 | LI: 75 | HI: 26
across all LOBs

30

Payout Levels

10 categories × 3 tiers =
30 distinct payout points

1,000

Combinations

Per-LOB assignment —
truly custom deals at scale

Next Steps — Action Plan

01

Train RMs & CDMs

1-hour structured session
covering all 4 files and
workflows

02

Assign Initial Categories

CDMs assign per-LOB
categories to all existing POSPs

03

Issue Coded Schedules

All POSPs receive their coded
schedule sheets within 1 week

04

Begin CDM Target Tracking

Monthly Volume Multiplier
monitoring starts next month

05

First Quarterly Review

Actual vs Target analysis using Business Data Template
